

Architecture Community 2025 Predictions: Adaptive Reuse, Housing Failures, Interest Rates, Discovery of the Imperfect, and Much More

January 3, 2025

Excerpted from the article published by [Archinect](#)

“While recent news of the Fed cutting back on the number of rate cuts anticipated next year has perhaps dimmed some expectations, we still anticipate an economy that positively affects architecture, engineering, and construction firms. With rates continuing to decrease, albeit more slowly, this will ideally help spur construction, particularly in the residential sector. Ideally, this translates to more work for architects and a better-performing industry economy.”
